Abstract of US2003127525

The invention relates to a smart card web comprising a carrier web whose softening temperature is at least 110 DEG C., preferably about 180 DEG C., and a cover web whose softening temperature is not higher than 110 DEG C. The invention also relates to a method for the manufacture of a smart card web. In the method, the smart card web is manufactured as a continuous web comprising a carrier web and a cover web attached to each other.
